PROFILE

Engineering student with a core proficiency in Java and growing experience in Machine Learning. I focus on building practical, functional solutions and have worked on projects involving Recommendation systems and AI-based early dyslexia assessment. Comfortable working across the development lifecycle — researching, implementing, testing, and improving system performance. Currently developing a wearable human safety device (patent in process), driven by an interest in technology that creates real impact.

EDUCATION

Jain University Bangalore, Karnataka — **Aug 2023-May 2027**
B. Tech, Computer Science and Business Systems — *CGPA: 8.56*

Excel Pre-university College — **Aug 2021-May2023**
Class 12th, State Board — *94.3 %*

Jnanaganga Residential School — **May 2020**
Class 10th, CBSE — *90.3 %*

SKILLS

- **Technical:** Java, HTML/CSS, Machine Learning Basics
- **Data & Analytics:** SQL (MySQL)
- **Tools:** GitHub, VS Code, Canva,
- **Soft Skills:** Communication, Presentation, Problem Solving, Research & Insights

PROJECTS

Tech Stack: Java, ML/AI, JavaScript, SQL, HTML/CSS, Scikit-learn, OpenCV, LLM APIs, GitHub

AI-Powered Dyslexia Risk Assessment for Children (Early Detection)- *Python, OpenCV, Flask, NumPy.*

- Developed a web-based bilingual assessment system (English & Hindi) enabling eye-tracking, handwriting evaluation, and cognitive tests for early dyslexia detection.
- Designed an ensemble model combining multiple ML techniques, improving prediction accuracy by **~15–20%** compared to individual models.
- Built an end-to-end pipeline (data collection → preprocessing → model → evaluation), reducing manual analysis effort by **40%+**.
- Generated actionable insights to assist educators and parents in early intervention and personalized learning support.

Music Recommendation System (ML + LLM based)- Python*, Scikit-learn, pandas, NumPy, Spotify APIs, LLM API*

- Identified and analyzed user listening patterns and behavioral signals to deliver hyper-personalized content, improving recommendation relevance by ~20–25%.
- Enabled natural language-based discovery, reducing user search effort by ~30% directly improving content discoverability and session engagement.
- Designed end-to-end user flow with focus on intuitive experience, mirroring product thinking applied in e-commerce discovery and retention.
- Applied hybrid ML model combining collaborative filtering and LLM APIs to solve the cold-start problem, increasing coverage for new users.

LEADERSHIP & ACTIVITIES

Social Media & Marketing Lead – Echo Club, Jain University

- Increased engagement by **30–40%** and grew followers by **500+** through content strategy and campaigns; boosted event participation by **25%+**.

Event Hosting & Anchoring

- Hosted events for **100–300+ participants**, strengthening audience engagement, communication, and presentation skills. Active in hackathons, dance, and presentations; Volunteer at Women Cell international Conference(**200+attendees**).

Hackathon

- Participated in Vibeathon 2025, a 36-hour offline Hackathon
